TOWN OF NEWBURGH
PLANNING BOARD
TECHNICAL REVIEW COMMENTS

PROJECT:	**SHOPPES AT UNION SQUARE AMENDED SITE PLAN**
PROJECT NO.:	**2018-10**
PROJECT LOCATION:	**SECTION 96 – BLOCK 1 – LOT 6.2**
REVIEW DATE:	**29 AUGUST, 2018**
MEETING DATE:	**6 SEPTEMBER, 2018**
PROJECT REPRESENTATIVE:	**KARC PLANNING CONSULTANTS/LANGAN ENGINEERING**

The Applicants have responded to our previous comments on the Amended Site Plan. Several items continue to be outstanding, including the following:

1. Engineer's evaluation regarding Operation and Maintenance of the Stormwater Management Facilities installed during Phase One which were designed and constructed in support of both Phase One and Phase Two. It is noted that during the original design of the Stormwater collection conveyance and treatment systems, that additional water quality volume treatment was requested of the Applicant, based on Town of Newburgh Planning Board policy for projects located within the Washington Lake Watershed. The original design included 110% of the required water quality volume treatment to be provided. This provides 10% additional water quality treatment volume above that which is required by the NYSDEC Design Standards.

2. The proposed project is an Amended Site Plan addressing the previous approved Phase Two project which included a proposed 18,102 square foot retail building identified at the time as a Staples Office Supply store. The current project proposes a site plan amending Phase Two portion of the project consisting of two retail buildings totaling 19,190 square feet, including provisions for a fast-food facility with a drive-up window. The redesigned facility has resulted in a slight reduction in overall site disturbance of approximately 0.1 acres.

3. A City of Newburgh flow acceptance letter was issued for the project dated 20 June 2008. The flow acceptance letter was for a hydraulic loading of 13,889 gpd. Projected hydraulic loading from the proposed amended. Plan totals 13,085 gpd, 804 gallons less than the original sewer flow acceptance allocation.

4. Supplemental Environmental information has been submitted, including a threatened endangered habitat suitability assessment performed by Ecological Solutions of Southburgh, Connecticut. Correspondence from the United States Fish and Wildlife Service has been received identifying potential threatened endangered species on the site. Each of these is addressed in the Ecological Solutions report.

5. Supplemental Traffic information has been received from the Applicant's Traffic Consultant identifying that the current proposal would generate an additional 17 pm peak hour trips and a corresponding reduction of 18 Saturday peak hour trips based on the change in the retail component mix.

6. Egological Solutions has re-evaluated the Federal Jurisdictional Wetlands on the site. A 14 August 2018 letter regarding the wetlands delineation identifies that the there are no Federal-US Army Corps. Engineers or State NYSDEC Wetlands located within the Phase Two area of the project.

7. Architectural plans as prepared by the Applicant's Architectural Consultant have been submitted for the Planning Board's review.

8. A Part One of the Full Environmental Assessment Form has been prepared by the Applicant's various consultants addressing modifications to the plans and comparing changes to the original SEQRA Negative Declaration and reaffirmed Negative Declaration previously issued for the project.

9. A Planning Board should determine whether a Public Hearing for the project is to be held.

10. Submission of the complete application to the Orange County Department of Planning is required. Sufficient information has been provided to allow for circulation of the plans and reports to the Orange County Planning Department.

Respectfully submitted,

McGoey, Hauser and Edsall

Below, please find our responses to comments received from our previous submission to the Town of Newburgh Planning Board on July 19, 2018.

Please find below our summary of responses to the Comments received from Patrick Hines, McGoey, Hauser, and Edsall in a letter dated August 2, 2018:

1. *The project is back before the Planning Board for an amendment to the Phase II retail component eliminating a former Staples retail in favor of 2 separate retail buildings approximately 1,028 sq. ft. larger than the previous proposal.*

   Response: No comment.

2. *The EAF submitted identifies that further ecological studies will be performed to identify threatened, endangered, rare or species of special concern. This information should be provided to the Planning Board.*

   Response: See attached study which is appended to the EAF.

3. *Stormwater management plans and reports were reviewed during the initial project review and approval. The original stormwater management plan and report identified treatment of 110% of the required water quality volume through the conveyance collection and treatment system. Under pipe storage for quantity control and a sand filter for water quality improvements were incorporated in the original design. All Phase II stormwater treatment improvements were installed during the Phase I construction of the project. It is requested the Applicant's representatives evaluate the condition of the improvements as installed and provide an updated report as to the function and design of the system.*

   Response: Langan Will complete an inspection of the stormwater management system installed during Phase 1 and will either confirm the system appears to be maintained and in working order or will identify needed maintenance which will be completed by the applicant.

4. *A revised Phase II project will slightly decrease (0.1 acres) the tributary watershed or the impervious area tributary to the previous improvements. The project is an amended site plan based on the 2010 (2008 design manual) standards which were in place during the SEQR review and site plan review for the project.*

   Response: No comment.

5. *Ken Werstend's comments regarding traffic impacts should be received. NYSDOT comments regarding the proposal should be received based on updated traffic information.*

   Response: See the response from our Traffic Consultant appended to the EAF.

6. *The Applicant's representatives are requested to evaluate the proposed increases in sewer hydraulic loading over that which was previously approved for the entire project. The City of Newburgh flow authorization letter for the original 2010 approval should be evaluated with regard to flow from the amended Phase II of the project.*

   Response: In the City of Newburgh letter dated 20 June 2008, the City granted approval for a sewage flow not to exceed 13,889 gallons per day for the Shoppes at Union Square development. Phase 1 of the development has since been built, which is a 4,820 SF retail building. This accounts for 482 gallons per day of the original 13,889 gallons per day allocation. Phase 2 is projected to use 5,021 gallons per day.

   After the construction of Phase 1 and Phase 2, a total of 5,503 gallons per day is projected, which is less than the originally approved 13,889 gallons per day. When Phase 3 is constructed, a 71,000 SF supermarket, an additional sewage flow rate of 7,100 gallons per day is anticipated. The total projected sewage flow rate of all three phases is 482 + 5,503 + 7,100 = 13,085 gallons per day, which is less than the originally approved allocation of 13,889 gallons per day.

7. *The Applicant's representatives have noted that the Phase III stream crossing will not be proposed at this time.*

   Response: Correct

8. *Landscaping plans should identify compliance with Section 85-13 #9(a).*

   Response: Figure entitled "Internal Landscaping Area for Phase II Parking Lot" is included in this submission, which shows 7.7% of landscaping provided greater than the 5% required.

9. *Health Department approval for the internal water system is required as hydrants are proposed to be added.*

   Response: The Orange County Department of Health application for approval of plans for public water supply improvement was filed with the County simultaneously with this resubmission package to the Town of Newburgh.

10. *Information provided for sizing of the grease trap proposed to serve retail D should be submitted.*

Response: Langen Engineering is currently completing the submission to the OCDOH and will provide this information to the board shortly.

11. *Standard Town of Newburgh water and sewer system notes must be updated on the plans. Copies of which are attached.*

    Response: The plans were revised to reflect the Standard Town of Newburgh water and sewer system notes provided.

12. *The federal jurisdictional wetland boundary identified in 2008 depicted to be confirmed. Jurisdictional wetland delineation should be provided.*

    Response: Comment Noted and will be discussed with the Town Engineer.

13. *Erosion sediment control plan should identify the discharge for the temporary sediment trap. Sediment trap may need to be phased as filling of the area is proposed.*

    Response: The soil erosion and sediment control plan has been revised to show the discharge for the temporary sediment trap.

14. *Our NYSDEC permits required for filling of the embankment and the westerly most portion of the site.*

    Response: With the exception of a SPDES stormwater permit, we understand no NYSDEC permits are required for the phase 2 work. We note that there are no wetlands directly adjacent to this area and no filling is proposed within the stream bed-and-banks.

15. *A slope stabilization detail is provided. Areas for this to be used should be delineated on erosion control plans.*

    Response: The soil erosion and sediment control plan has been revised to delineate the areas where the slope stabilization blanket shall be used.

Please find below our summary of responses to the Comments received from Kenneth Wersted, P.E., Creighton Manning Engineering, LLP, in a letter dated July 27, 2018:

1. *The last trip generation and analysis received by our office as part of the original analysis and subsequently approved, was dated September 8, 2009 from JCE. It*

included 22,922 SF of retail (not including the supermarket), generating 152 total trips in the PM peak hour, and 206 trips in the Saturday peak hour based on ITE 8th Edition data. Updating the original analysis to 10th Edition yields about 20% more trips in the PM peak hour, and 6% fewer trips in the Saturday peak hour. (See table below). The updated trip generation estimate provided by Maser Consulting, P.A. (7/18/2018), applies an average rate to the retail square footage rather than using the ITE regression equation for LUC 820. Adding in the restaurant with drive-thru yields a total of 120 trips in the PM and 168 trips in the Saturday peak hours. The average rate is near the low end of the data points for this use; therefore, the regression equation has a better correlation to the data. Using the equation for the retail yields a total trip generation of 203 trips in the PM and 247 in the Saturday peak hour. Use of the average rate yields results that are less than originally studies (79 to 82%), while the regression equation is greater than studies (120 to 134%). There is a Smoothie King in Wappinger's Falls and it appears to operate like a Starbucks but with a menu limited to smoothies. The Maser analysis assumed it to operate like a fast-food restaurant with a drive-through, which we agree is appropriate given the lack of data on a smoothie shop, but this type of use has a much higher trip generation rate on a per square-foot basis that retail, which, in part, yields a proposed trip generation of higher than originally studies. If a fast-food restaurant is overestimating the trips generated by a use with a very limited menu, transaction data from Wappinger's Falls could help identify the expected number of trips and substantiate that even the proposed use, the expected operations will be similar to that originally studied.

Condition	Total Trips	
	PM Peak Hour	Saturday Peak Hour
Original-ITE 8th Edition (22,922 SF)	152 (-%)	206 (-%)
Original-ITE 10th Edition (22,922 SF)	183 (120%)	193 (94%)
Proposed-Using Average Rate for Retail	120 (79%)	168 (82%)
Proposed-Using Regression Equation	203 (134%)	247 (120%)

Response: See attached response memo from Maser Consulting appended to the EAF.

2. *The applicant has updated the parking tables on the Phase 2 site plan, indicating that Phase 2 provides enough parking to meet zoning and that the sum of existing, Phase 1, and Phase 2 exceeds the required amount.*

Response: Agreed

3. *Although the west side of the building is indicated to be the rear of the building, with no customer access, two handicap accessible parking spaces are proposed to be added.*

   Response: Correct.

4. *The architectural plans (A101) do not indicate any protrusion from the building towards the drive-through lane, while the Front and Left elevations (A102) suggest there to be - the site plan shows none. In addition, the Left elevation doesn't show a drive-thru window as one would expect.*

   Response: See attached amended Architectural drawings.

Please find below our summary of responses to the Comments received from Karen Arent Landscape Architect, in a letter dated August 6, 2018:

1. The consultant made all requested changes. The plant proposed to replace one of the ornamental grasses that does not do well in this area is Equisetum hyemale. I could not find it on the drawing. If it is in a location that is confined, for example, between curbs, it is fine. However, if it is near the edges of the side without curb surrounding it, another grass should be specified.

   Response: This plant is proposed to be located within the sidewalk planting beds between the proposed buildings, which are completely surrounded by pavement and building.

2. The Town of Newburgh requires a landscape bond and several inspections to ensure work is done in accordance with plans. Please submit a landscape cost estimate to this office for review.

   Response: Estimates for bond shall be provided upon site plan approval.

Thank you for your assistance with this matter.

Sincerely,

Kelly Libolt

1.0 INTRODUCTION

The Applicant is proposing to Modify Phase 2 of the previously Approved Development Project. Phase 2 of the project included the construction of a single 18,102 sq. ft. Staples structure and associated parking and infrastructure. The current plan proposes to construct two retail buildings which are approximately 19,130 square feet in the same location as the proposed previously approved Staples building.

A Habitat Suitability Assessment was completed for five federally listed species including the dwarf wedgemussel (*Alasmidonta heterodon*), small whorled pogonia (*Isotria medeoloides*), Indiana bat (*Myotis sodalis*), Northern long-eared bat (*Myotis septentrionalis*), and bog turtle (*Glyptemys muhlenbergii*) and as part of the US Army Corps of Engineers (USACE) Nationwide Permit requirements for the project and US Fish and Wildlife Service species list for the site (*Attachment 1*). Field assessments were completed on May 18 and June 16, 2018 to determine whether suitable habitat for these species is present on the site. Habitat cover types were also observed and are described below.

TABLE 1
COVER TYPES IDENTIFIED ON THE SITE

HABITAT COVER TYPES			
NO.	DESCRIPTION	COVERAGE (ACRES)	DISTURBANCE (ACRES)
1	Wetland/ Tributary	2.5	0.4
2	Upland Forest	6.5	3.0
2	Previously Developed Area	2.39	2.39

2.0 HABITAT SUITABILITY ASSESSMENT/CONCLUSION

2.1 Dwarf wedgemussel

The dwarf wedge mussel is a small freshwater mussel that rarely exceeds 1.5 inches (38 mm) in length. It is brown or yellowish-brown in color. Adult mussels are filter-feeders, feeding on algae and other small suspended particles. They spend most of their time buried almost completely in the bottom of streams and rivers. Typical habitat for this mussel includes running waters of all sizes, from small brooks to large rivers. Bottom substrates include silt, sand and gravel, which may be distributed in relatively small patches behind larger cobbles and boulders. The river velocity is usually slow to moderate. Dwarf wedge mussels appear to select or are at least tolerant of relatively low levels of calcium in the water.

Conclusion - There is no potential habitat for this species on the site since the tributary is a Class C watercourse and is culverted at Orr Avenue and Route 300.

2.2 Small whorled pogonia

The small whorled pogonia is a member of the orchid family. It usually has a single grayish-green stem that grows about 10 inches tall when in flower and about 14 inches when bearing fruit. The plant is named for the whorl of five or six leaves near the top of the stem and beneath the flower. The leaves are grayish-green, somewhat oblong and 1 to 3.5 inches long. The single or paired greenish-yellow flowers are about 0.5 to 1 inch long and appear in May or June. The fruit, an upright ellipsoid capsule, appears later in the year. This orchid grows in older hardwood stands of beech, birch, maple, oak, and hickory that have an open understory. Sometimes it grows in stands of softwoods such as hemlock. It prefers acidic soils with a thick layer of dead leaves, often on slopes near small streams.

Conclusion - There is no potential habitat for this species since there is no older growth forest on the site but rather young woods with a thick dense understory.

2.3 Indiana bats

The Indiana bat typically hibernates in caves/mines in the winter and roosts under bark or in tree crevices in the spring, summer, and fall. Suitable potential summer roosting habitat is characterized by trees (dead, dying, or alive) or snags with exfoliating or defoliating bark, or containing cracks or crevices that could potentially be used by Indiana bats as a roost. The minimum diameter of roost trees observed to date is 2.5 inches for males and 4.3 inches for females. However, maternity colonies generally use trees greater than or equal to 9 inches dbh. Overall, roost tree structure appears to be more important to Indiana bats than a particular tree species or habitat type. Females appear to be more habitat specific than males presumably because of the warmer temperature requirements associated with gestation and rearing of young. As a result, they are generally found at lower elevations than males may be found. Roosts are warmed by direct exposure to solar radiation, thus trees exposed to extended periods of direct sunlight are preferred over those in shaded areas. However, shaded roosts may be preferred in very hot conditions. As

larger trees afford a greater thermal mass for heat retention, they appear to be preferred over smaller trees.

Streams associated with floodplain forests, and impounded water bodies (ponds, wetlands, reservoirs, etc.) where abundant supplies of flying insects are likely found provide preferred foraging habitat for Indiana bats, some of which may fly up to 2-5 miles from upland roosts on a regular basis. Indiana bats also forage within the canopy of upland forests, over clearings with early successional vegetation (*e.g.,* old fields), along the borders of croplands, along wooded fencerows, and over farm ponds in pastures. While Indiana bats appear to forage in a wide variety of habitats, they seem to tend to stay fairly close to tree cover.

Conclusion - Approximately 3 acres of young growth forest will be impacted as a result of the proposed expansion. The trees in this area include maple, oak, black cherry, quaking aspen, and ash all in the 4-12 inch dbh range. Although there were no likely roost or maternal colony trees observed the Applicant will only conduct tree clearing activities between October 1 and April 1. A note has been placed on the plan "To avoid impacts to Indiana and Northern long eared bats during construction tree-clearing will be completed between October 1st and April 1st so that the project is not likely to adversely affect these species".

2.4 Northern long-eared bat

Winter Habitat: Same as the Indiana bat northern long-eared bats spend winter hibernating in caves and mines, called hibernacula. They typically use large caves or mines with large passages and entrances; constant temperatures; and high humidity with no air currents. Specific areas where they hibernate have very high humidity, so much so that droplets of water are often seen on their fur. Within hibernacula, surveyors find them in small crevices or cracks, often with only the nose and ears visible.

Summer Habitat: During summer, northern long-eared bats roost singly or in colonies underneath bark, in cavities, or in crevices of both live and dead trees. Males and non-reproductive females may also roost in cooler places, like caves and mines. This bat seems opportunistic in selecting roosts, using tree species based on suitability to retain bark or provide cavities or crevices. It has also been found, rarely, roosting in structures like barns and sheds.

Feeding Habits: Northern long-eared bats emerge at dusk to fly through the understory of forested hillsides and ridges feeding on moths, flies, leafhoppers, caddisflies, and beetles, which they catch while in flight using echolocation. This bat also feeds by gleaning motionless insects from vegetation and water surfaces.

Conclusion - The northern long eared bat requires/occupies practically the same habitat niche as the Indiana bat. Impacts to habitat and mitigation would be consistent with the recommendations for the Indiana bat.

2.5 Bog turtle

According to the U.S. Fish and Wildlife Service, in the 2001 Bog Turtle (*Clemmys muhlenbergii*), Northern Population Recovery Plan. Hadley, Massachusetts. 103 pp. last revised on April 13, 2006 bog turtle habitat is recognized by three criteria:

1. **Suitable hydrology**. Bog turtle wetlands are typically spring-fed with shallow surface water or saturated soils present year-round, although in summer the wet area(s) may be restricted to near spring head(s). Typically these wetlands are interspersed with dry and wet pockets. There is often subsurface flow. In addition, shallow rivulets (less than 4 inches deep) or pseudo-rivulets are often present.

2. **Suitable soils**. Usually a bottom substrate of permanently saturated organic or mineral soils. These are often soft, mucky-like soils (this does not refer to a technical soil type); you will usually sink to your ankles (3-5 inches) or deeper in muck, although in degraded wetlands or summers of dry years this may be limited to areas near spring heads or drainage ditches. In some portions of the species' range, the soft substrate consists of scattered pockets of peat instead of muck.

3. **Suitable vegetation**. Dominant vegetation of low grasses and sedges (in emergent wetlands), often with a scrub-shrub wetland component. Common emergent vegetation includes, but is not limited to: tussock sedge (*Carex stricta*), soft rush (*Juncus effusus*), rice cut grass (*Leersia oryzoides*), sensitive fern (*Onoclea sensibilis*), tearthumbs (*Polygonum spp.*), jewelweeds (*Impatiens spp.*), arrowheads (*Saggitaria spp.*), skunk cabbage (*Symplocarpus foetidus*), panic grasses (*Panicum spp.*), other sedges (*Carex spp.*), spike rushes (*Eleocharis spp.*), grass-of-Parnassus (*Parnassia glauca*), shrubby cinquefoil (*Dasiphora fruticosa*), sweet-flag (*Acorus calamus*), and in disturbed sites, reed canary grass (*Phalaris arundinacea*) or purple loosestrife (*Lythrum salicaria*). Common scrub-shrub species include alder (*Alnus spp.*), red maple (*Acer rubrum*), willow (*Salix spp.*), tamarack (*Larix laricina*), and in disturbed sites, multiflora rose (*Rosa multiflora*). Some forested wetland habitats are suitable given hydrology, soils and/or historic land use. These forested wetlands include red maple, tamarack, and cedar swamps.

Conclusion - The wetland on the site is a small densely vegetated forested wetland that is dry at the surface. This surface flow has inconsistent hydrology and no groundwater seeps. There is no potential bog turtle habitat on or in the vicinity of the site.

Subject: List of threatened and endangered species that may occur in your proposed project location, and/or may be affected by your proposed project

To Whom It May Concern:

The enclosed species list identifies threatened, endangered, proposed and candidate species, as well as proposed and final designated critical habitat, that may occur within the boundary of your proposed project and/or may be affected by your proposed project. The species list fulfills the requirements of the U.S. Fish and Wildlife Service (Service) under section 7(c) of the Endangered Species Act (ESA) of 1973, as amended (16 U.S.C. 1531 *et seq.*). This list can also be used to determine whether listed species may be present for projects without federal agency involvement. New information based on updated surveys, changes in the abundance and distribution of species, changed habitat conditions, or other factors could change this list.

Please feel free to contact us if you need more current information or assistance regarding the potential impacts to federally proposed, listed, and candidate species and federally designated and proposed critical habitat. Please note that under 50 CFR 402.12(e) of the regulations implementing section 7 of the ESA, the accuracy of this species list should be verified after 90 days. This verification can be completed formally or informally as desired. The Service recommends that verification be completed by visiting the ECOS-IPaC site at regular intervals during project planning and implementation for updates to species lists and information. An updated list may be requested through the ECOS-IPaC system by completing the same process used to receive the enclosed list. If listed, proposed, or candidate species were identified as potentially occurring in the project area, coordination with our office is encouraged. Information on the steps involved with assessing potential impacts from projects can be found at: http://www.fws.gov/northeast/nyfo/es/section7.htm

Please be aware that bald and golden eagles are protected under the Bald and Golden Eagle Protection Act (16 U.S.C. 668 *et seq.*), and projects affecting these species may require development of an eagle conservation plan (http://www.fws.gov/windenergy/

eagle_guidance.html). Additionally, wind energy projects should follow the Services wind energy guidelines (http://www.fws.gov/windenergy/) for minimizing impacts to migratory birds and bats.

Guidance for minimizing impacts to migratory birds for projects including communications towers (e.g., cellular, digital television, radio, and emergency broadcast) can be found at: http://www.fws.gov/migratorybirds/CurrentBirdIssues/Hazards/towers/towers.htm; http://www.towerkill.com; and http://www.fws.gov/migratorybirds/CurrentBirdIssues/Hazards/towers/comtow.html.

We appreciate your concern for threatened and endangered species. The Service encourages Federal agencies to include conservation of threatened and endangered species into their project planning to further the purposes of the ESA. Please include the Consultation Tracking Number in the header of this letter with any request for consultation or correspondence about your project that you submit to our office.

Endangered Species Act Species

There is a total of 5 threatened, endangered, or candidate species on this species list.

Species on this list should be considered in an effects analysis for your project and could include species that exist in another geographic area. For example, certain fish may appear on the species list because a project could affect downstream species.

IPaC does not display listed species or critical habitats under the sole jurisdiction of NOAA Fisheries[1], as USFWS does not have the authority to speak on behalf of NOAA and the Department of Commerce.

See the "Critical habitats" section below for those critical habitats that lie wholly or partially within your project area under this office's jurisdiction. Please contact the designated FWS office if you have questions.

Trip Generation Comparison
MC Project No. 17000583B

We are in receipt of the comments provided to you and the Planning Board by Ken Wersted, P.E. dated July 27, 2018 on our July 18, 2018 submission relative to trip generation estimates. We offer the following explanation:

Our evaluation utilized average trip generation rates for the retail portion of the project (17,475 s.f.) and also used average rates for the Smoothie King establishment (1,655 s.f.) assuming it would generate traffic similar to a fast-food restaurant with a drive-thru window.

Mr. Westred suggested using the ITE regression equation for the retail component in lieu of the average rate because it would provide a better correlation to the project size. The result would yield a higher level of generated trips.

Mr. Wersted had also noted that the Smoothie King would likely generate less traffic than a typical fast-food restaurant.

We have obtained information from Smoothie King representatives that indicates approximately 145 trips on average are generated during a typical weekday and some 160 trips on average are generated during a typical Saturday.

During the PM Peak Hour, the Smoothie King could be expected to generate approximately 6.5% of their daily volume equaling 20 total trips (entering and exiting) and some 10% of the Saturday daily volume equaling some 32 total trips (entering and exiting).

Applying the regression equation to the retail component (17,475 s.f.), the total retail generation would equate to 149 trips during the weekday PM Peak Hour and some 156 trips during the Saturday Peak Hour. Combining the above-mentioned Smoothie King trip generation data with

the retail data, the total site would generate 169 weekday PM Peak Hour trips and some 188 Saturday Peak Hour trips.

Comparing these values to the original traffic volume projections (152 PM Peak Hour trips and 206 Saturday Peak Hour trips), the current proposal would generate an additional 17 PM Peak Hour trips and a reduction of 18 trips during the Saturday Peak Hour. We believe these changes are inconsequential with respect to future traffic operations.

Re: Federal Wetland Assessment
The Shoppes at Newburgh (Phase 2) and (Phase 3) - 1217 Route 300
Town of Newburgh, Orange County, New York

Dear Jerame:

Ecological Solutions, LLC completed a wetland assessment on August 8, 2018 for Phase 2 of the project known as The Shoppes at Newburgh located at 1217 Route 300. There are no Federal - US Army Corps of Engineers (USACE) or State - New York State Department of Environmental Conservation (NYSDEC) wetlands located on Phase 2. The assessment was completed in accordance with the Army Corps of Engineers (USACE) Wetlands Delineation Manual (January 1987), Routine Determination Method and Northcentral/Northeast supplement. There is no New York State Department of Environmental Conservation (NYSDEC) regulated wetland at this location.

Phase 2 of the site was assessed for Federal wetlands based upon the identification of the three mandatory criteria for wetland determination as outlined in the 1987 Federal Manual and supplement: dominant hydrophytic vegetation, hydric soils, and evidence of wetland hydrology. The Routine Methodology procedure for wetland determination was used. Transects consisting of at several sample points were walked. Dominant vegetation around each sample point was identified and its percent cover quantified. The areas were checked in detail for the presence of wetland hydrologic indicators. Soil profiles were then observed and characterized at each point and no hydric soils exist.

The detailed field investigation included:

1. Identification of vegetation species to determine whether there was a dominance of hydrophytic plants and areas containing transitional but primarily wetland-oriented species.

2. Determination of soil features for hydric (poorly and very poorly drained) natural soils.

3. Observation of site features displaying evidence of wetland hydrology based on the presence of inundated areas, apparent high seasonal water tables, and evidence of saturation within 12 inches of the surface (considered the root zone) during sufficient periods during the growing season to provide for anaerobic/hydric soil conditions.

Based on observed field conditions there is no federal wetland located on Phase 2 of the site.

In addition a wetland delineation was completed for Phase 3 on August 8, 2018 and a federal wetland area was delineated on the site and drains to the tributary that flows through the site. This tributary is a Class "C" watercourse and is not regulated by the NYSDEC under Article 15 Protection of Waters (*Attachment*). The wetland and tributary are however regulated by the USACE.

If you need any additional information, please contact me.

Sincerely,
ECOLOGICAL SOLUTIONS, LLC

Rare Plants and Rare Animals

This location is in the vicinity of Rare Animals

This location is in the vicinity of State-Listed Bats

If your project or action is within or near an area with a rare animal, a permit may be required if the species is listed as endangered or threatened and the department determines the action may be harmful to the species or its habitat.

If your project or action is within or near an area with rare plants and/or significant natural communities, the environmental impacts may need to be addressed.

The presence of a unique geological feature or landform near a project, unto itself, does not trigger a requirement for a NYS DEC permit. Readers are advised, however, that there is the chance that a unique feature may also show in another data layer (ie. a wetland) and thus be subject to permit jurisdiction.

Please refer to the "Need a Permit?" tab for permit information or other authorizations regarding these natural resources.

Disclaimer: If you are considering a project or action in, or near, a wetland or a stream, a NYS DEC permit may be required. The Environmental Resources Mapper does not show all natural resources which are regulated by NYS DEC, and for which permits from NYS DEC are required. For example, Regulated Tidal Wetlands, and Wild, Scenic, and Recreational Rivers, are currently not included on the maps.

2. STANDARDS FOR TYPE, SPREAD, HEIGHT, ROOT BALL AND QUALITY OF NEW PLANT MATERIAL SHALL BE IN ACCORDANCE WITH GUIDELINES AS SET FORTH IN THE "AMERICAN STANDARD FOR NURSERY STOCK", PUBLISHED BY THE AMERICAN NURSERY AND LANDSCAPE ASSOCIATION. PLANT MATERIAL SHALL HAVE NORMAL HABIT OF GROWTH AND BE HEALTHY, VIGOROUS, AND FREE FROM DISEASES AND INSECT INFESTATION.

3. NEW PLANT MATERIAL SHALL BE NURSERY GROWN UNLESS SPECIFIED OTHERWISE. ALL PLANTS SHALL BE SET PLUMB AND SHALL BEAR THE SAME RELATIONSHIP TO FINISHED GRADE AS THE PLANT'S ORIGINAL GRADE BEFORE DIGGING. PLANT MATERIAL OF THE SAME SPECIES AND SPECIFIED AS THE SAME SIZE SHOULD BE SIMILAR IN SHAPE, COLOR AND HABIT. THE LANDSCAPE ARCHITECT HAS THE RIGHT TO REJECT ANY MATERIAL THAT DOES NOT CONFORM TO THE TYPICAL OR SPECIFIED HABIT OF THAT SPECIES. ALL TREES SHALL HAVE A STRAIGHT TRUNK AND FULL HEAD AND MEET ALL REQUIREMENTS SPECIFIED. ANY TREE THAT LOSES THE MAIN LEADER SHALL BE REPLACED.

4. THE BACKFILL MIXTURE AND SOIL MIXES TO BE INSTALLED PER THE SPECIFICATIONS.

5. THE CONTRACTOR SHALL BECOME FAMILIAR WITH THE SITE AND SUBGRADE DRAINAGE OR PERCOLATION CHARACTERISTICS, WHETHER THE SUBGRADE SOILS ARE EXISTING OR TO REMAIN OR IMPORTED AND PLACED. CONTRACTOR TO ENSURE POSITIVE VERTICAL DRAINAGE THROUGHOUT PLANTED AREAS. DISCREPANCIES SHALL BE ADDRESSED WITH THE PROJECT LANDSCAPE ARCHITECT PRIOR TO PLANTING OF MATERIALS.

6. NO PLANT SHALL BE PUT INTO THE GROUND BEFORE FINISH GRADING HAS BEEN COMPLETED AND APPROVED BY THE PROJECT LANDSCAPE ARCHITECT OR PROJECT ENGINEER.

7. ALL PLANT INSTALLATIONS SHALL BE COMPLETED EITHER BETWEEN APRIL 1 — JUNE 15 OR AUGUST 15 — NOVEMBER 1, UNLESS OTHERWISE DIRECTED BY THE PROJECT LANDSCAPE ARCHITECT. SEE LAWN SEEDING DATES IN SEEDING NOTES.

8. ALL FENCE AND GUIDE RAIL INSTALLATIONS SHALL BE COMPLETED PRIOR TO COMMENCEMENT OF ANY LANDSCAPE PLANTING, LAWN AND GRASSES, OR IRRIGATION WORK.

9. PRIOR TO CONSTRUCTION, THE CONTRACTOR SHALL VERIFY THE LOCATION OF ALL EXISTING UNDERGROUND UTILITY AND SEWER LINES AND SHALL AVOID DAMAGE TO ALL UTILITIES DURING THE COURSE OF CONSTRUCTION. NOTIFY THE PROJECT ENGINEER AND OWNER IMMEDIATELY OF ANY CONFLICTS WITH PROPOSED PLANTING LOCATIONS. THE CONTRACTOR SHALL BE RESPONSIBLE FOR ANY DAMAGE.

10. LOCATIONS OF EXISTING BURIED UTILITY LINES SHOWN ON THE PLANS ARE BASED UPON BEST AVAILABLE INFORMATION AND ARE TO BE CONSIDERED APPROXIMATE. IT SHALL BE THE RESPONSIBILITY OF THE CONTRACTOR 1) TO VERIFY THE LOCATIONS OF UTILITY LINES AND ADJACENT TO THE WORK AREA 2) TO PROTECT OF ALL UTILITY LINES DURING THE CONSTRUCTION PERIOD 3) TO REPAIR ANY AND ALL DAMAGE TO UTILITIES, STRUCTURES, SITE APPURTENANCES, ETC. WHICH OCCURS AS A RESULT OF THE CONSTRUCTION.

11. THE CONTRACTOR SHALL NOT MAKE SUBSTITUTIONS. IF THE SPECIFIED LANDSCAPE MATERIAL IS NOT OBTAINABLE, THE CONTRACTOR SHALL SUBMIT PROOF OF NON-AVAILABILITY TO THE LANDSCAPE ARCHITECT AND OWNER, TOGETHER WITH A WRITTEN PROPOSAL FOR USE OF AN EQUIVALENT MATERIAL.

12. LANDSCAPE CONTRACTOR TO STAKE OUT PLANTING LOCATIONS, FOR REVIEW AND APPROVAL BY THE LANDSCAPE ARCHITECT AND/OR OWNER BEFORE PLANTING WORK BEGINS. THE LANDSCAPE ARCHITECT AND/OR OWNER SHALL DIRECT THE CONTRACTOR IN THE FINAL PLACEMENT OF ALL PLANT MATERIAL AND LOCATION OF PLANTING BEDS TO ENSURE COMPLIANCE WITH DESIGN INTENT UNLESS OTHERWISE INSTRUCTED.

13. ALL MATERIALS ARE SUBJECT TO THE APPROVAL OF THE LANDSCAPE ARCHITECT BEFORE, DURING, AND AFTER INSTALLATION. THE LANDSCAPE ARCHITECT MAY REVIEW PLANT MATERIALS AT THE SITE FOR COMPLIANCE WITH REQUIREMENTS FOR GENUS, SPECIES, VARIETY, SIZE, AND QUALITY. THE LANDSCAPE ARCHITECT RETAINS THE RIGHT TO FURTHER REVIEW PLANT MATERIALS FOR SIZE AND CONDITION OF BALLS AND ROOT SYSTEM, INSECTS, INJURIES, AND LATENT DEFECTS, AND TO REJECT UNSATISFACTORY OR DEFECTIVE MATERIAL AT ANY TIME DURING PROGRESS OF WORK. THE CONTRACTOR SHALL REMOVE REJECTED PLANT MATERIALS IMMEDIATELY FROM PROJECT SITE AS DIRECTED BY THE LANDSCAPE ARCHITECT OR OWNER.

14. ALL PLANT MATERIAL SHALL BE HEALTHY, VIGOROUS, AND FREE OF PESTS AND DISEASE. ANY PLANT MATERIAL WHICH IS DISEASED, DISTRESSED, MISSING, 25% OR MORE DEAD, WHICH DO NOT DEVELOP FROM PLANTING STOCK, THAT APPEAR UNHEALTHY OR UNSIGHTLY AND/OR HAVE LOST THEIR NATURAL SHAPE DUE TO DEAD BRANCHES DEAD, OR REJECTED FOR ANY OTHER REASON SHALL BE COMPLETELY REMOVED. ALL SHALL BE PROMPTLY REMOVED FROM THE SITE AND REPLACED WITH MATERIAL OF THE SAME SPECIES, QUANTITY, AND SIZE AND MEETING ALL PLANT LIST SPECIFICATIONS.

15. CONTRACTOR SHALL BE RESPONSIBLE FOR DELIVERY SCHEDULE AND PROTECTION BETWEEN DELIVERY AND PLANTING PER SPECIFICATIONS TO MAINTAIN HEALTHY PLANT CONDITIONS.

16. DELIVERY, STORAGE, AND HANDLING
   A. PACKAGED MATERIALS: PACKAGED MATERIALS SHALL BE DELIVERED IN CONTAINERS SHOWING WEIGHT, ANALYSIS, AND NAME OF MANUFACTURER. MATERIALS SHALL BE PROTECTED FROM DETERIORATION DURING DELIVERY, AND WHILE STORED AT SITE.

   B. TREES AND SHRUBS: THE CONTRACTOR SHALL PROVIDE TREES AND SHRUBS DUG FOR THE GROWING SEASON FOR WHICH THEY WILL BE PLANTED. DO NOT PRUNE PRIOR TO DELIVERY UNLESS OTHERWISE DIRECTED BY THE LANDSCAPE ARCHITECT. DO NOT BEND OR BIND-TIE TREES OR SHRUBS IN SUCH A MANNER AS TO DAMAGE BARK, BREAK BRANCHES, OR DESTROY NATURAL SHAPE. PROVIDE PROTECTIVE COVERING DURING TRANSIT. DO NOT DROP BALLED AND BURLAPPED STOCK DURING DELIVERY OR HANDLING.

   C. ALL PLANTS SHALL BE BALLED AND BURLAPPED OR CONTAINER GROWN AS SPECIFIED. NO CONTAINER GROWN STOCK WILL BE ACCEPTED IF IT IS ROOT BOUND. ALL ROOTBALL WRAPPING AND BINDING MATERIAL MADE OF SYNTHETICS OR PLASTICS SHALL BE REMOVED FROM THE TOP OF THE BALL AT THE TIME OF PLANTING. IF THE PLANT IS SHIPPED WITH A WIRE BASKET AROUND THE ROOT BALL, THE WIRE BASKET SHALL BE CUT AND FOLDED DOWN 8 INCHES INTO THE PLANTING HOLE. WITH CONTAINER GROWN STOCK, THE CONTAINER SHALL BE REMOVED AND THE ROOT BALL SHALL BE CUT THROUGH THE SURFACE IN TWO LOCATIONS.

   D. THE CONTRACTOR SHALL HAVE TREES AND SHRUBS DELIVERED TO SITE AFTER PREPARATIONS FOR PLANTING HAVE BEEN COMPLETED AND PLANT IMMEDIATELY. IF PLANTING IS DELAYED MORE THAN 6 HOURS AFTER DELIVERY, THE CONTRACTOR SHALL SET TREES AND SHRUBS IN SHADE, PROTECT FROM WEATHER AND MECHANICAL DAMAGE AND KEEP ROOTS MOIST BY COVERING WITH MULCH, BURLAP OR OTHER ACCEPTABLE MEANS OF RETAINING MOISTURE.

17. ALL LANDSCAPED AREAS TO BE CLEARED OF ROCKS, STUMPS, TRASH AND OTHER UNSIGHTLY DEBRIS. ALL FINE GRADED AREAS SHOULD BE HAND RAKED SMOOTH ELIMINATING ANY CLUMPS AND UNEVEN SURFACES PRIOR TO PLANTING OR MULCHING.

18. ALL PLANT MATERIAL SHALL BE INSTALLED AS PER DETAILS, NOTES AND CONTRACT SPECIFICATIONS. THE LANDSCAPE ARCHITECT MAY REVIEW INSTALLATION AND MAINTENANCE PROCEDURES.

19. CONTRACTOR'S GUARANTEE: ALL PLANTINGS AND PLANTING AREAS SHALL BE PERMANENTLY MAINTAINED. NEW PLANT MATERIAL SHALL BE GUARANTEED TO BE ALIVE AND IN VIGOROUS GROWING CONDITION FOR A PERIOD OF TWO YEARS FOLLOWING ACCEPTANCE BY THE OWNER. THE CONTRACTOR SHALL BE RESPONSIBLE FOR FULLY MAINTAINING (INCLUDING BUT NOT LIMITED TO: WATERING, PRUNING, SPRAYING, MULCHING, FERTILIZING, ETC.) ALL OF THE PLANT MATERIALS AND LAWN FOR THE DURATION OF THE GUARANTEED PERIOD. PLANT MATERIAL FOUND TO BE UNHEALTHY, DYING OR DEAD DURING THIS PERIOD, SHALL BE REMOVED AND REPLACED IN KIND BY THE CONTRACTOR AT NO EXPENSE TO THE OWNER.

20. THE CONTRACTOR SHALL KEEP AREA CLEAN DURING DELIVERY AND INSTALLATION OF PLANT MATERIALS. REMOVE AND DISPOSE OF OFF-SITE ANY ACCUMULATED DEBRIS OR UNUSED MATERIALS. REPAIR DAMAGE TO ADJACENT AREAS CAUSED BY LANDSCAPE INSTALLATION OPERATIONS.

21. ALL PLANTS SHALL BE WATERED THOROUGHLY TWICE DURING THE FIRST 24— HOUR PERIOD AFTER PLANTING. ALL PLANTS SHALL THEN BE WATERED WEEKLY OR AS REQUIRED BY SITE AND WEATHER CONDITIONS TO MAINTAIN VIGOROUS AND HEALTHY PLANT GROWTH.

22. AFTER PLANT IS PLACED IN TREE PIT LOCATION, ALL TWINE HOLDING ROOT BALL TOGETHER SHOULD BE COMPLETELY REMOVED AND THE BURLAP SHOULD BE PULLED DOWN SO 1/3 OF THE ROOT BALL IS EXPOSED. SYNTHETIC BURLAP SHOULD BE COMPLETELY REMOVED AFTER INSTALLATION.

23. ALL EXPOSED GROUND SURFACES THAT ARE NOT PAVED WITHIN THE CONTRACT LIMIT LINE, AND THAT ARE NOT COVERED BY LANDSCAPE PLANTING OR SEEDING AS SPECIFIED, SHALL BE COVERED BY A NATURAL MULCH FROM A LOCAL SOURCE HARVESTED IN A SUSTAINABLE MANNER THAT WILL PREVENT SOIL EROSION AND THE EMANATION OF DUST. MULCH SHALL BE A FIBROUS DOUBLE SHREDDED HARDWOOD MULCH. MULCH SHOULD NOT BE PILED UP AROUND THE TRUNK OF ANY PLANT MATERIAL. NO MULCH OR TOPSOIL SHOULD BE TOUCHING THE BASE OF THE TRUNK ABOVE THE ROOT COLLAR.

   REUSE SURFACE SOILS STOCKPILED ON SITE, VERIFYING COMPLIANCE WITH PLANTING SOIL AND TOPSOIL CRITERIA IN THIS SPECIFICATION THROUGH TESTING. CLEAN SURFACE SOIL OF ALL ROOTS, PLANTS, SOD, AND GRAVEL OVER 1" IN DIAMETER AND DELETERIOUS MATERIALS. IF ON-SITE SOILS ARE TO BE USED FOR PROPOSED PLANTING, THE CONTRACTOR SHALL DEMONSTRATE, THROUGH SOIL TESTING, THAT ON-SITE SOILS MEET THE SAME CRITERIA AS INDICATED IN NOTES PLANS AND SPECIFICATIONS.

   SUPPLEMENT WITH IMPORTED OR MANUFACTURED TOPSOIL FROM OFF SITE SOURCES WHEN TOPSOIL AND PLANTING SOIL QUANTITIES ARE INSUFFICIENT. PLANTING SOIL SHALL BE A FRIABLE LOAM OBTAINED FROM NATURALLY WELL-DRAINED SITES WHERE TOPSOIL OCCURS AT LEAST 4" DEEP. DO NOT OBTAIN FROM AGRICULTURAL LAND, BOGS, MARSHES OR CONTAMINATED SITES.

   CONTRACTOR SHALL TEST SOILS AND FURNISH SAMPLES UPON REQUEST. PACKAGED MATERIALS SHALL BE UNOPENED BAGS OR CONTAINERS, EACH BEARING A NAME, GUARANTEE, AND TRADEMARK OF THE PRODUCER, MATERIAL COMPOSITION, MANUFACTURER'S CERTIFIED ANALYSIS, AND THE WEIGHT OF THE MATERIALS. SOIL OR AMENDMENT MATERIALS SHALL BE STORED ON SITE TEMPORARILY IN STOCKPILES PRIOR TO PLACEMENT AND SHALL BE PROTECTED FROM INTRUSION OF CONTAMINANTS AND EROSION. AFTER MIXING, SOIL MATERIALS SHALL BE COVERED WITH A TARPAULIN UNTIL TIME OF ACTUAL USE.

TEST RESULTS SHALL EVALUATE FOR ALL CRITERIA LISTED IN THIS SPECIFICATION.. IF TESTING AGENCY DETERMINES THAT THE SOILS ARE DEFICIENT IN ANY MANNER AND MAY BE CORRECTED BY ADDING AMENDMENTS, THE CONTRACTOR SHALL FOLLOW STATED RECOMMENDATIONS FOR SOIL IMPROVEMENT AND FURNISH SUBMITTALS FOR ALL AMENDMENTS PRIOR TO DELIVERY OF SOIL TO THE PROJECT SITE.

   A. THE FOLLOWING TESTING SHOULD BE PERFORMED AND RESULTS GIVEN TO THE LANDSCAPE ARCHITECT FOR APPROVAL BEFORE INSTALLATION:

AREAS PRONE TO EROSION SHALL BE PROTECTED AS NECESSARY WITH BIODEGRADABLE EROSION CONTROL MATERIALS IN ADDITION TO THE STANDARD MULCH. ALL MULCH MATERIALS AND HYDROSEED/MULCH MIX MUST BE REMOVED FROM ANY ADJACENT STRUCTURES, PAVING OR VEHICLES IMMEDIATELY.

4. SEEDING DATES FOR THIS MIXTURE SHALL BE AS FOLLOWS:
   SPRING: APRIL 1 — MAY 31
   FALL: AUGUST 16 — OCTOBER 31

5. GERMINATION RATES WILL VARY AS TO TIME OF YEAR FOR SOWING. CONTRACTOR TO IRRIGATE SEEDED AREA UNTIL AN ACCEPTABLE STAND OF COVER IS ESTABLISHED BY OWNER.

LAWN WATERING SCHEDULE

THE FOLLOWING WATERING SCHEDULE COVERS ROUGHLY 8 WEEKS TO ESTABLISH A HEALTHY STAND OF GRASS FROM SEED. THE CONTRACTOR SHALL BE OBLIGATED TO ENSURE A HEALTHY STAND OF GRASS AT THE END OF THE MAINTENANCE/BOND PERIOD. ANY BARE OR DEAD AREAS IN THE LAWN SHALL BE PREPARED, RESEEDED AND REESTABLISHED PRIOR TO THE END OF THE MAINTENANCE/BOND PERIOD AND TO THE SATISFACTION OF THE PROJECT LANDSCAPE ARCHITECT AND THE OWNER.

IMPORTANT ASPECTS TO ATTAINING AND SUSTAINING A HEALTHY STAND OF GRASS ARE THE INSTALLATION OF TOPSOIL, SEED BED PREPARATION, ATTAINING OPTIMAL pH FOR THE INTENDED PLANT SPECIES, FERTILIZING, MULCH COVERING, AND SUFFICIENT WATERING PER THESE NOTES AND/OR PROJECT SPECIFICATIONS.

1. SEEDING SHALL BE DONE DURING THE SEASONS SPECIFIED IN THE LAWN SEED MIX NOTES AND/OR PROJECT SPECIFICATIONS.
2. AFTER THE SEEDBED IS PREPARED, SEED IS INSTALLED, AND MULCH IS APPLIED, WATER LIGHTLY TO KEEP THE TOP 2 INCHES OF SOIL CONSISTENTLY MOIST, NOT SATURATED. AT NO TIME SHOULD WATER BE APPLIED TO THE POINT OF RUNOFF OR THE DISPLACEMENT OF SEED.
3. DEPENDING ON SOIL TEMPERATURES, IT MAY TAKE SEVERAL WEEKS FOR GERMINATION TO OCCUR. DIFFERENT SPECIES WITHIN THE MIX GERMINATE AT DIFFERENT TIMES AND THEREFORE CONTRACTOR SHOULD CONTINUE THE LIGHT WATERING, AS DESCRIBED ABOVE, UNTIL THERE IS AT LEAST 2 INCHES OF GROWTH THROUGHOUT.
4. AT THIS POINT, WATERING FREQUENCY MAY BE REDUCED TO EVERY 3 TO 5 DAYS. WATER SHALL BE APPLIED TO WET A 6 INCH MINIMUM SOIL DEPTH TO PROMOTE HEALTHY DEEP ROOTS.
5. BEGIN MOWING ONCE PER WEEK AFTER THE GRASS HAS REACHED 3 INCHES HEIGHT. MOW TO A HEIGHT OF NO LESS THAN 2-½ INCHES. AFTER 2 TO 3 WEEKS OF MOWING, CONTINUE TO WATER TO A 6 INCH MINIMUM SOIL DEPTH AS NECESSARY PER WEATHER CONDITIONS, AND SOIL MOISTURE SENSORS IF APPLICABLE.

SOD SPECIFICATIONS (IF USED) :

1. SOD IS TO BE A FESCUE/BLUEGRASS BLEND APPROXIMATELY 70/30% SOD IS TO BE INDIGENOUS TO THE AREA AND BE FURNISHED BY A REPUTABLE GROWER WITH A MINIMUM 5 YEARS EXPERIENCE.
2. PRIOR TO SODDING ALL AREAS ARE TO BE TOPSOILED, FINE GRADED, RAKED, WATERED LIGHTLY, AND FERTILIZED WITH A STARTER FERTILIZER.
3. ALL STONES GREATER THAN 2" DIAMETER SHALL BE REMOVED.
4. SOD TO BE INSTALLED PERPENDICULAR TO ALL SLOPED AREAS. SOD STRIPS TO BE LAID OUT SO JOINTS ARE NOT CLOSER THAN ONE FOOT (1'-0") FROM EACH OTHER.
5. SOD IS TO BE WATERED AT A RATE OF AT LEAST ONE AND A HALF INCHES (1½") PER WEEK UNTIL ROOT MASS HAS BECOME ESTABLISHED. AFTER THIS HAS OCCURRED NORMAL WATERING OF AT LEAST ONE INCH (1") PER WEEK IS TO COMMENCE.
6. ALL SOD AREAS ARE TO BE ROLLED IF ANY HEAVING OR DEPRESSIONS OCCUR.

COMPACTED SOIL LOOSENING NOTE

DUE TO GENERAL CONSTRUCTION ACTIVITIES AND ADJACENT SITE COMPACTION REQUIREMENTS, SUBGRADE SOILS WITHIN PROPOSED PLANTING AREAS TEND TO BECOME HIGHLY COMPACTED. IN ORDER TO CREATE A HEALTHY GROWTH MEDIUM FOR ALLOW PROPOSED PLANTINGS TO ESTABLISH A VIGOROUS ROOT MASS, THIS SUBGRADE SOIL MUST UNDERGO A RESTORATION PROCESS. LOOSEN SUBRADE SOILS TO A DEPTH OF 18 INCHES. IN ADDITION, IMPORTED OR AMENDED EXISTING SOILS SHALL BE MIXED WITH SUBGRADE SOILS WHERE THEY MEET IN ORDER TO CREATE A TRANSITIONAL GRADIENT TO ALLOW FOR PROPER DRAINAGE.

CONSTRUCTION SPECIFICATIONS

1. TIGHTLY SEAL SLEEVE AROUND THE PUMP DISCHARGE HOSE WITH A STRAP OR SIMILAR DEVICE.
2. PLACE FILTER BAG ON SUITABLE BASE (E.G., MULCH, LEAF/WOOD COMPOST, WOODCHIPS, SAND, OR STRAW BALES) LOCATED ON A LEVEL OR 5% MAXIMUM SLOPING SURFACE. DISCHARGE TO A STABILIZED AREA. EXTEND BASE A MINIMUM OF 12 INCHES FROM EDGES OF BAG.
3. CONTROL PUMPING RATE TO PREVENT EXCESSIVE PRESSURE WITHIN THE FILTER BAG IN ACCORDANCE WITH THE MANUFACTURER RECOMMENDATIONS. AS THE BAG FILLS WITH SEDIMENT, REDUCE PUMPING RATE.
4. REMOVE AND PROPERLY DISPOSE OF FILTER BAG UPON COMPLETION OF PUMPING OPERATIONS OR AFTER BAG HAS REACHED CAPACITY, WHICHEVER OCCURS FIRST. SPREAD THE DEWATERED SEDIMENT FROM THE BAG IN AN APPROVED UPLAND AREA AND STABILIZE WITH SEED AND MULCH BY THE END OF THE WORK DAY. RESTORE THE SURFACE AREA BENEATH THE BAG TO ORIGINAL CONDITION UPON REMOVAL OF THE DEVICE.
5. USE NONWOVEN GEOTEXTILE WITH DOUBLE STITCHED SEAMS USING HIGH STRENGTH THREAD. SIZE SLEEVE TO ACCOMMODATE A MAXIMUM 4 INCH DIAMETER PUMP DISCHARGE HOSE. THE BAG MUST BE MANUFACTURED FROM A NONWOVEN GEOTEXTILE THAT MEETS OR EXCEEDS MINIMUM AVERAGE ROLL VALUES (MARV) FOR THE FOLLOWING:

GRAB TENSILE	250 LB	ASTM D-4632
PUNCTURE	150 LB	ASTM D-4833
FLOW RATE	70 GAL/MIN/FT²	ASTM D-4491
PERMITTIVITY (SEC⁻¹)	1.2 SEC⁻¹	ASTM D-4491

APPARENT OPENING SIZE (AOS)	0.15-0.18 MM	ASTM D-4751
SEAM STRENGTH	90%	ASTM D-4632

6. REPLACE FILTER BAG IF BAG CLOGS OR HAS RIPS, TEARS, OR PUNCTURES. DURING OPERATION KEEP CONNECTION BETWEEN PUMP HOSE AND FILTER BAG WATER TIGHT. REPLACE BEDDING IF IT BECOMES DISPLACED.

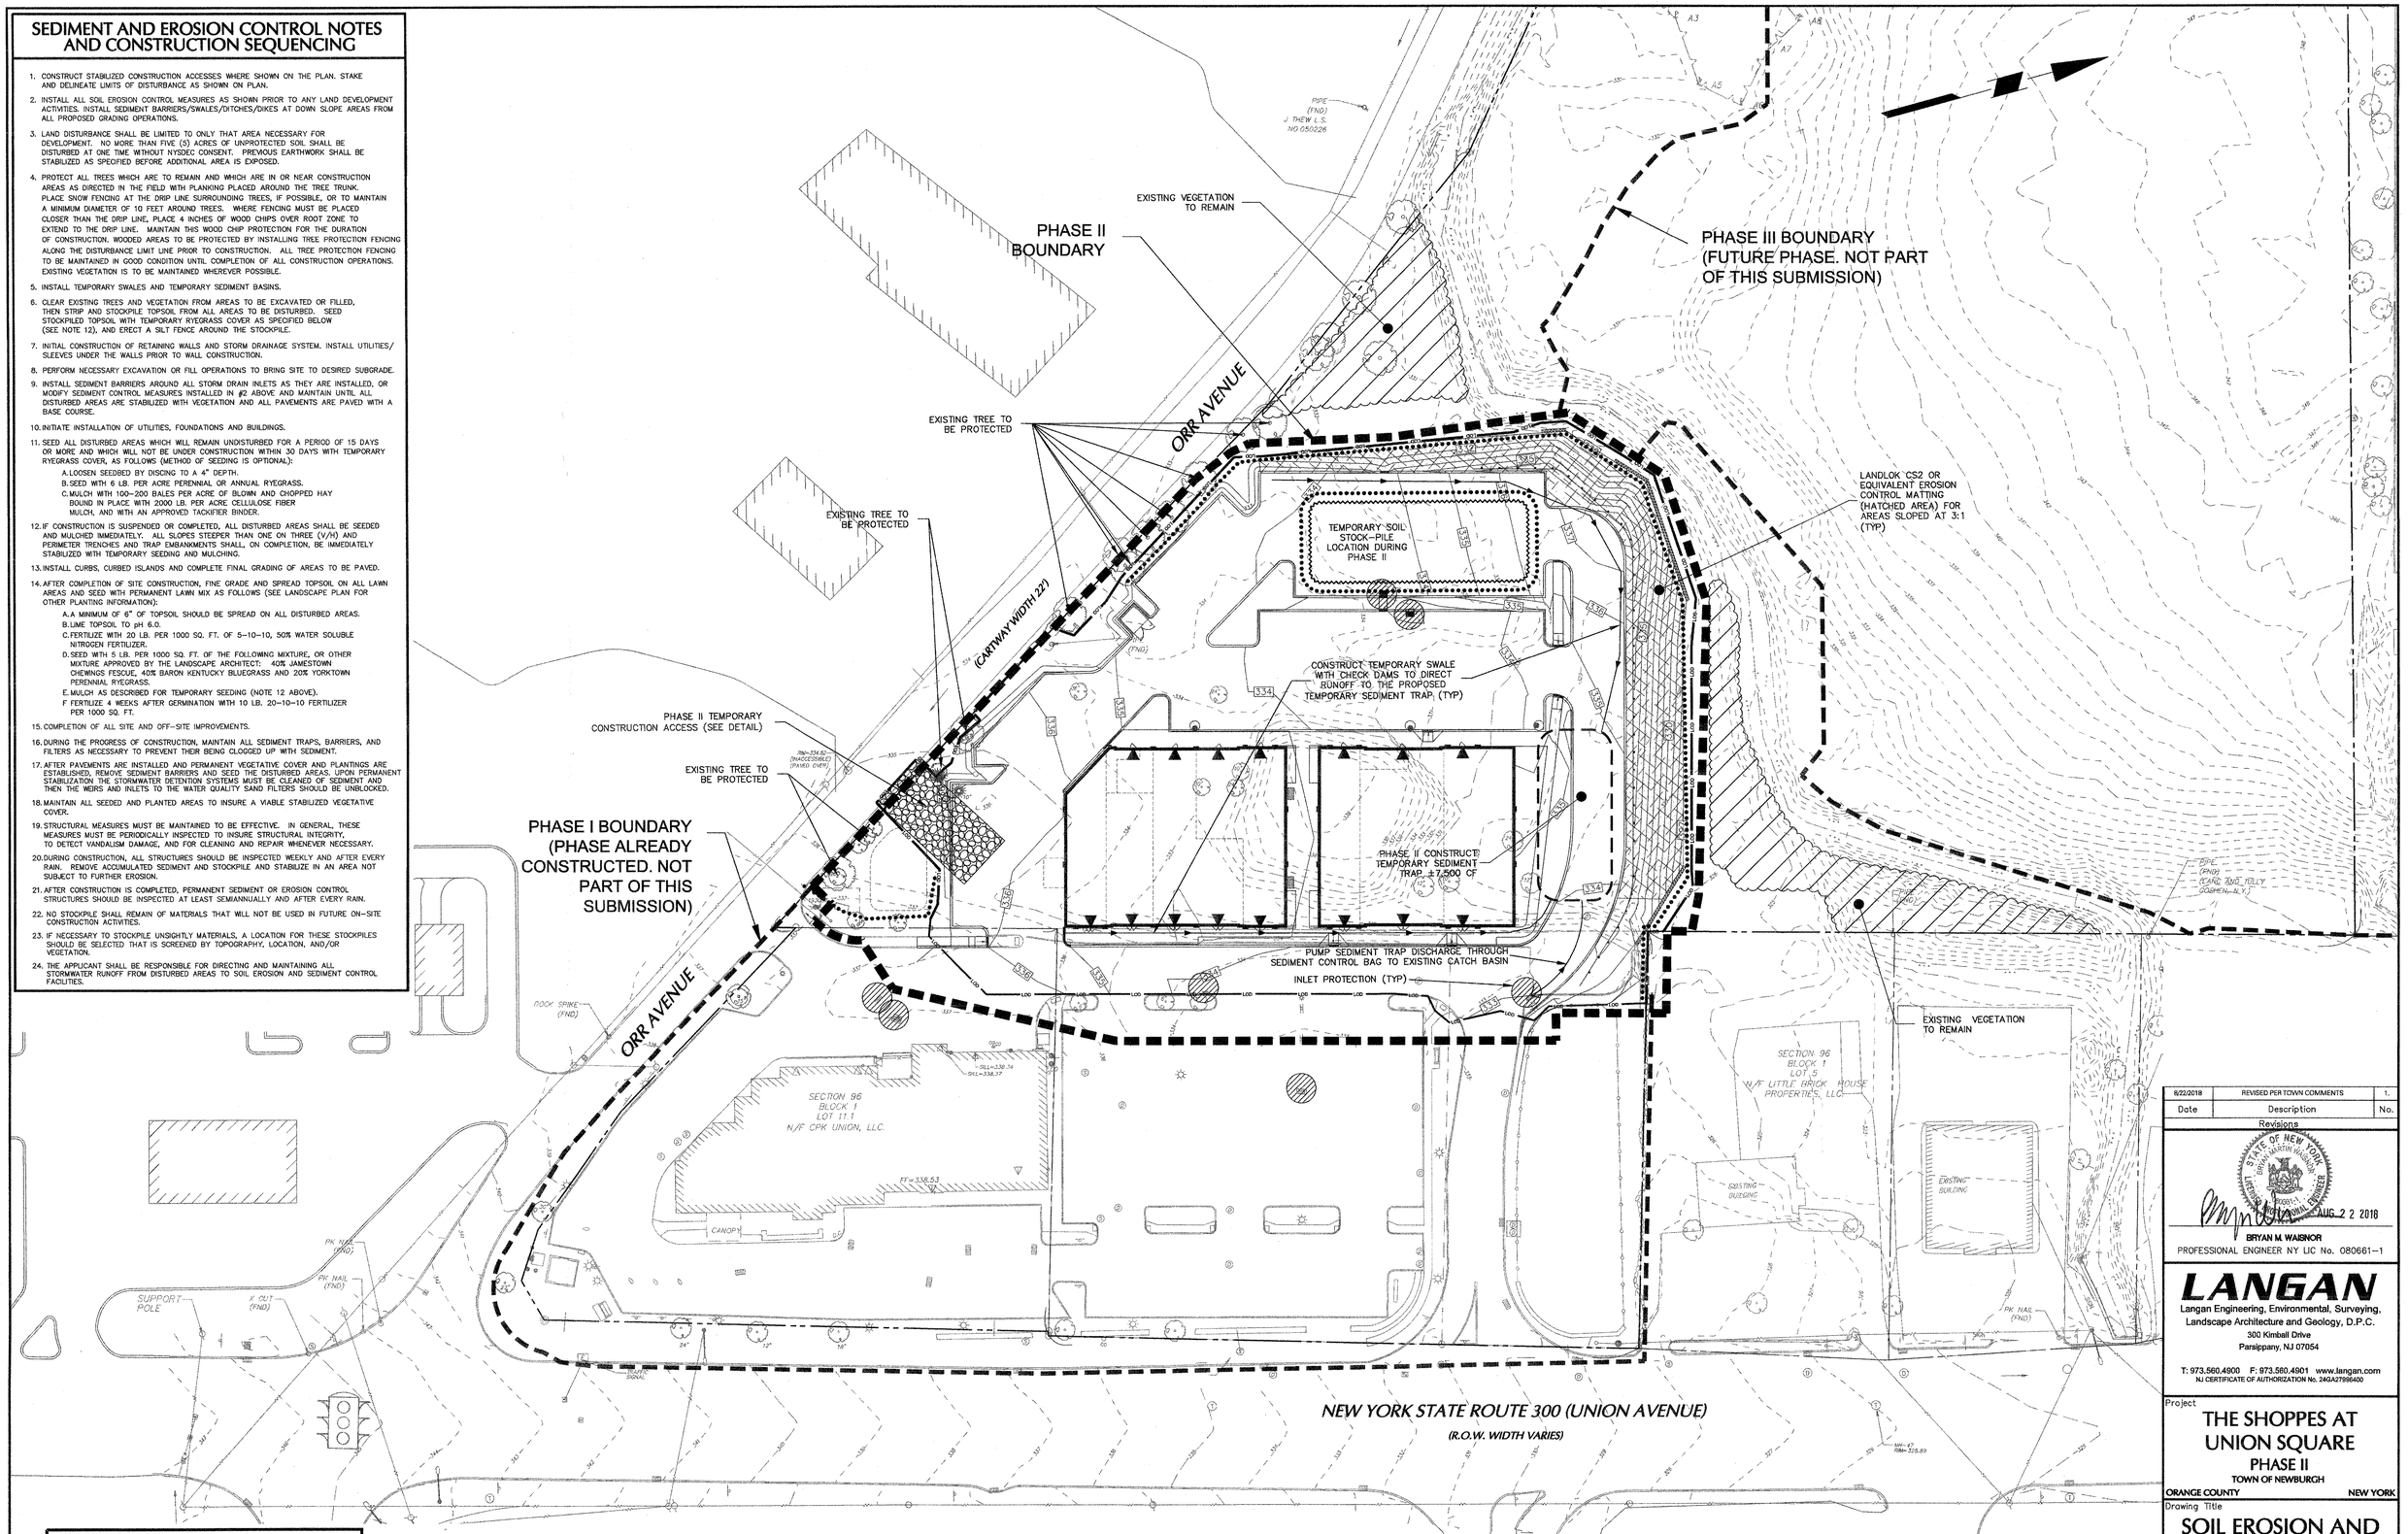
SEDIMENT AND EROSION CONTROL NOTES AND CONSTRUCTION SEQUENCING

1. CONSTRUCT STABILIZED CONSTRUCTION ACCESSES WHERE SHOWN ON THE PLAN. STAKE AND DELINEATE LIMITS OF DISTURBANCE AS SHOWN ON PLAN.
2. INSTALL ALL SOIL EROSION CONTROL MEASURES AS SHOWN PRIOR TO ANY LAND DEVELOPMENT ACTIVITIES. INSTALL SEDIMENT BARRIERS/SWALES/DITCHES/DIKES AT DOWN SLOPE AREAS FROM ALL PROPOSED GRADING OPERATIONS.
3. LAND DISTURBANCE SHALL BE LIMITED TO ONLY THAT AREA NECESSARY FOR DEVELOPMENT. NO MORE THAN FIVE (5) ACRES OF UNPROTECTED SOIL SHALL BE DISTURBED AT ONE TIME WITHOUT NYSDEC CONSENT. PREVIOUS EARTHWORK SHALL BE STABILIZED AS SPECIFIED BEFORE ADDITIONAL AREA IS EXPOSED.
4. PROTECT ALL TREES WHICH ARE TO REMAIN AND WHICH ARE IN OR NEAR CONSTRUCTION AREAS AS DIRECTED IN THE FIELD WITH PLANKING PLACED AROUND THE TREE TRUNK. PLACE SNOW FENCING AT THE DRIP LINE SURROUNDING TREES, IF POSSIBLE, OR TO MAINTAIN A MINIMUM DIAMETER OF 10 FEET AROUND TREES. WHERE FENCING MUST BE PLACED CLOSER THAN THE DRIP LINE, PLACE 4 INCHES OF WOOD CHIPS OVER ROOT ZONE TO EXTEND TO THE DRIP LINE. MAINTAIN THIS WOOD CHIP PROTECTION FOR THE DURATION OF CONSTRUCTION. WOODED AREAS TO BE PROTECTED BY INSTALLING TREE PROTECTION FENCING ALONG THE DISTURBANCE LIMIT LINE PRIOR TO CONSTRUCTION. ALL TREE PROTECTION FENCING TO BE MAINTAINED IN GOOD CONDITION UNTIL COMPLETION OF ALL CONSTRUCTION OPERATIONS. EXISTING VEGETATION IS TO BE MAINTAINED WHEREVER POSSIBLE.
5. INSTALL TEMPORARY SWALES AND TEMPORARY SEDIMENT BASINS.
6. CLEAR EXISTING TREES AND VEGETATION FROM AREAS TO BE EXCAVATED OR FILLED, THEN STRIP AND STOCKPILE TOPSOIL FROM ALL AREAS TO BE DISTURBED. SEED STOCKPILED TOPSOIL WITH TEMPORARY RYEGRASS COVER AS SPECIFIED BELOW (SEE NOTE 12), AND ERECT A SILT FENCE AROUND THE STOCKPILE.
7. INITIAL CONSTRUCTION OF RETAINING WALLS AND STORM DRAINAGE SYSTEM. INSTALL UTILITIES/ SLEEVES UNDER THE WALLS PRIOR TO WALL CONSTRUCTION.
8. PERFORM NECESSARY EXCAVATION OR FILL OPERATIONS TO BRING SITE TO DESIRED SUBGRADE.
9. INSTALL SEDIMENT BARRIERS AROUND ALL STORM DRAIN INLETS AS THEY ARE INSTALLED, OR MODIFY SEDIMENT CONTROL MEASURES INSTALLED IN #2 ABOVE AND MAINTAIN UNTIL ALL DISTURBED AREAS ARE STABILIZED WITH VEGETATION AND ALL PAVEMENTS ARE PAVED WITH A BASE COURSE.
10. INITIATE INSTALLATION OF UTILITIES, FOUNDATIONS AND BUILDINGS.
11. SEED ALL DISTURBED AREAS WHICH WILL REMAIN UNDISTURBED FOR A PERIOD OF 15 DAYS OR MORE AND WHICH WILL NOT BE UNDER CONSTRUCTION WITHIN 30 DAYS WITH TEMPORARY RYEGRASS COVER, AS FOLLOWS (METHOD OF SEEDING IS OPTIONAL):
    A. LOOSEN SEEDBED BY DISCING TO A 4" DEPTH.
    B. SEED WITH 6 LB. PER ACRE PERENNIAL OR ANNUAL RYEGRASS.
    C. MULCH WITH 100–200 BALES PER ACRE OF BLOWN AND CHOPPED HAY BOUND IN PLACE WITH 2000 LB. PER ACRE CELLULOSE FIBER MULCH, AND WITH AN APPROVED TACKIFIER BINDER.
12. IF CONSTRUCTION IS SUSPENDED OR COMPLETED, ALL DISTURBED AREAS SHALL BE SEEDED AND MULCHED IMMEDIATELY. ALL SLOPES STEEPER THAN ONE ON THREE (V/H) AND PERIMETER TRENCHES AND TRAP EMBANKMENTS SHALL, ON COMPLETION, BE IMMEDIATELY STABILIZED WITH TEMPORARY SEEDING AND MULCHING.
13. INSTALL CURBS, CURBED ISLANDS AND COMPLETE FINAL GRADING OF AREAS TO BE PAVED.
14. AFTER COMPLETION OF SITE CONSTRUCTION, FINE GRADE AND SPREAD TOPSOIL ON ALL LAWN AREAS AND SEED WITH PERMANENT LAWN MIX AS FOLLOWS (SEE LANDSCAPE PLAN FOR OTHER PLANTING INFORMATION):
    A. A MINIMUM OF 6" OF TOPSOIL SHOULD BE SPREAD ON ALL DISTURBED AREAS.
    B. LIME TOPSOIL TO pH 6.0.
    C. FERTILIZE WITH 20 LB. PER 1000 SQ. FT. OF 5–10–10, 50% WATER SOLUBLE NITROGEN FERTILIZER.
    D. SEED WITH 5 LB. PER 1000 SQ. FT. OF THE FOLLOWING MIXTURE, OR OTHER MIXTURE APPROVED BY THE LANDSCAPE ARCHITECT: 40% JAMESTOWN CHEWINGS FESCUE, 40% BARON KENTUCKY BLUEGRASS AND 20% YORKTOWN PERENNIAL RYEGRASS.
    E. MULCH AS DESCRIBED FOR TEMPORARY SEEDING (NOTE 12 ABOVE).
    F. FERTILIZE 4 WEEKS AFTER GERMINATION WITH 10 LB. 20–10–10 FERTILIZER PER 1000 SQ. FT.
15. COMPLETION OF ALL SITE AND OFF–SITE IMPROVEMENTS.
16. DURING THE PROGRESS OF CONSTRUCTION, MAINTAIN ALL SEDIMENT TRAPS, BARRIERS, AND FILTERS AS NECESSARY TO PREVENT THEIR BEING CLOGGED UP WITH SEDIMENT.
17. AFTER PAVEMENTS ARE INSTALLED AND PERMANENT VEGETATIVE COVER AND PLANTINGS ARE ESTABLISHED, REMOVE SEDIMENT BARRIERS AND SEED THE DISTURBED AREAS. UPON PERMANENT STABILIZATION THE STORMWATER DETENTION SYSTEMS MUST BE CLEANED OF SEDIMENT AND THEN THE WEIRS AND INLETS TO THE WATER QUALITY SAND FILTERS SHOULD BE UNBLOCKED.
18. MAINTAIN ALL SEEDED AND PLANTED AREAS TO INSURE A VIABLE STABILIZED VEGETATIVE COVER.
19. STRUCTURAL MEASURES MUST BE MAINTAINED TO BE EFFECTIVE. IN GENERAL, THESE MEASURES MUST BE PERIODICALLY INSPECTED TO INSURE STRUCTURAL INTEGRITY, TO DETECT VANDALISM DAMAGE, AND FOR CLEANING AND REPAIR WHENEVER NECESSARY.
20. DURING CONSTRUCTION, ALL STRUCTURES SHOULD BE INSPECTED WEEKLY AND AFTER EVERY RAIN. REMOVE ACCUMULATED SEDIMENT AND STOCKPILE AND STABILIZE IN AN AREA NOT SUBJECT TO FURTHER EROSION.
21. AFTER CONSTRUCTION IS COMPLETED, PERMANENT SEDIMENT OR EROSION CONTROL STRUCTURES SHOULD BE INSPECTED AT LEAST SEMIANNUALLY AND AFTER EVERY RAIN.
22. NO STOCKPILE SHALL REMAIN OF MATERIALS THAT WILL NOT BE USED IN FUTURE ON–SITE CONSTRUCTION ACTIVITIES.
23. IF NECESSARY TO STOCKPILE UNSIGHTLY MATERIALS, A LOCATION FOR THESE STOCKPILES SHOULD BE SELECTED THAT IS SCREENED BY TOPOGRAPHY, LOCATION, AND/OR VEGETATION.
24. THE APPLICANT SHALL BE RESPONSIBLE FOR DIRECTING AND MAINTAINING ALL STORMWATER RUNOFF FROM DISTURBED AREAS TO SOIL EROSION AND SEDIMENT CONTROL FACILITIES.



THIS EROSION CONTROL PLAN DEPICTS THE EROSION CONTROL METHODS AND LOCATIONS ONLY. SEE SITE, GRADING & DRAINAGE, UTILITY PLANS, ETC. FOR REMAINDER OF SITEWORK BUILDING, PAVED AREA, UTILITY LOCATIONS, ETC.

THE OWNER IS ASSIGNED THE RESPONSIBILITY FOR THE CONSTRUCTION AND MAINTENANCE OF THE MEASURES AS DETAILED ON THIS SOIL EROSION & SEDIMENT CONTROL PLAN.
